## How to make height fit the content? #33

[Edit](#)[New Issue](#)

**mixdesign** opened this issue on Mar 14 · 3 comments

**mixdesign** commented on Mar 14

I want fixed width, but dynamic height which should resize depending on html content. Is it possible?  
Thatnk you!

**xudafeng** commented on Mar 17

Owner

@**mixdesign** It could not support `dynamic height adaptation` in real-time rendering, but `offline rendering` can be used to get the height at the time when you want.

**mixdesign** commented on Mar 17

What you mean saying offline? I call an API, get the data of array, create each card with different height content. That's all.

**xudafeng** commented on Mar 17

Owner

Do `pre rendering` with data in an other container before append it.

# Not Autoresponsive for Height #4

**Closed**

jayesbe opened this issue 27 days ago · 2 comments

jayesbe commented 27 days ago

In the samples and examples provided.. the Height is being manually set.

Can Height be automatic based on the contents and the grid responsive to width.

I don't know the height of the contents since the contents are dynamic.

jayesbe commented 26 days ago

I was able to do something using onLayout. Though the solution wasn't perfect and all the content was

floating on top of each other.. it wasn't auto-responsive.

# Improvement plan

- infinite scroll support
- offline rendering with visual dom intergration
- mixed typesetting practice
- extendible & configurable

# Testing

Macaca

## Testing Pyramid

...

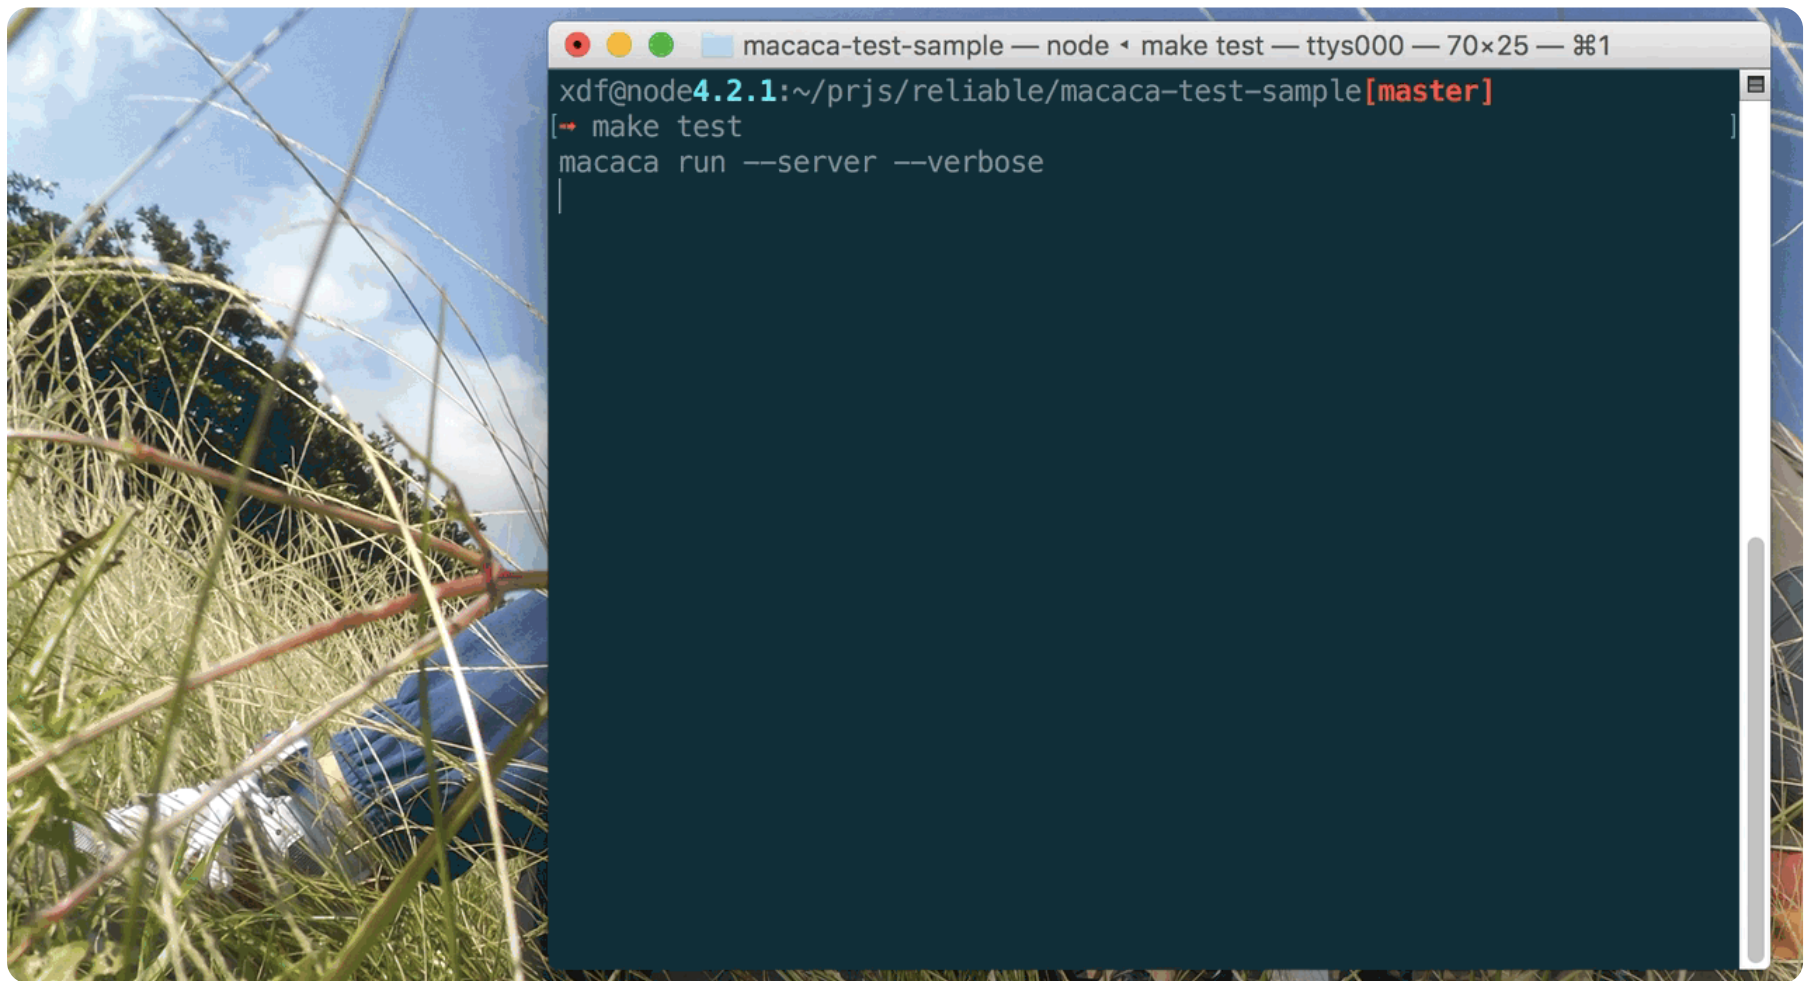

```
it('render container style', function() {  
  const style = component.props.style;  
  style.position.should.be.equal('relative');  
  style.height.should.be.equal(Math.ceil(tempString.length / (props.containerWidth / ite  
});
```
